Zinc sulfate	G	E	X

This chart is a guide only and caution should be taken when handling these chemicals. This information is based on laboratory evaluations and published research data but factors such as variations in glove thickness, chemical concentration, temperature, length of time and degree of exposure all affect the performance. This chart does not serve as a warranty for the performance of the glove type in any specific application.

Gloves 4U Chemical Resistance Chart

The Gloves 4U Chemical Resistance Chart is intended as a quick guide only. It has been designed to be a reference tool to get you started in the complex glove selection process and is to be used as general information only. For more specific information such as breakthrough and permeation time, please contact our sales team on 0113 237 2555 or email sales@gloves4u.eu

The team at Gloves 4U recommends that you use caution at all times – our gloves are disposable products designed to provide the wearer with barrier protection, and are not designed for prolonged contact with chemicals. Please ensure you are wearing the correct glove for your safety.

Gloves 4U Tips on staying safe whilst using chemicals:

- Before donning your gloves, wash and dry your hands carefully
- Ensure that the glove you are using is suitable for the chemical that you are using
- Do not use gloves beyond the recommended exposure time.
- Check the gloves during use for any sign of degradation.
- When removing the glove, ensure that you do not touch the outside of the contaminated glove with your bare hand
